# Pneumatic Measuring Device **miniSX+** Precise, Easy to Use & transfer data

## General Features

- It works with all known probes.
- Produced with 2-4 Channels
- 7 inch colorful Graphic Interface
- 100 Gauge measurement memory
- Saving Air with Open-Closed Air
- Internal Double Precise Regulator
- Circularity measurement
- Multiple Language Support
- Service Support

## Data transfer

- RS232, USB, Ethernet, WIFI
- Last 10.000 data recordings
- Direct access to the Kao DS server enables access to well-known quality programs.
- SQL database
- QDAS connection
- 1D, 2D Barcode usage & Connection

## Optional Features

With the connection of additional modules LVDT, Mitutoyo, RS232, encoder, and analog/digital-based probes are connected and integrated into the measurement display.

The MiniSX+ is a robust, benchtop air-gauging device crafted from 30 years of user feedback, built in a single solid body. It preserves the key features of previous models, enhanced to meet modern standards. With this device, you'll avoid air consumption, store measurement data, and transfer it seamlessly.
